Austria - Kamptal - Langenlois

of Fred Loimer and his wines, a true star in the Austrian Kamptal region.

Ownership/Founders Fred Loimer Start of Activity 1998 Vitiviniculture Certified biodynamic Hectares 85 Bottles produced 500.000

RIED KAFERBERG GRÜNER VELTRINER KAMPTAL

100% Grüner Veltliner

Production area: Langenlois

Terrain: argilloso e sabbioso, sedimenti marini su roccia

primaria

Harvest: manual

Vinification: whole cluster pressing and maceration for 24 hours, then in 1,250-litre and 2,500-litre oak barrels for 4 weeks

at a maximum of 24°C

Refinement: in oak barrels on whole lees for 11 months without sulphur dioxide and on fine lees for 9 months in stainless steel tanks with low sulphur dioxide content

Color: golden with a slight green tinge

Fragrance: aromas of dried herbs and candied fruit, scents of

gingerbread

Flavor: juicy, velvety texture and a mineral core, pineapple, apple and orange jelly flavours, calm and assertive with a long

fruity and salty finish

Alcoholic Grade: 12.5% vol

Fred Loimer, who graduated in the early 1990s, caused quite a stir in Langenlois and the surrounding area because, despite coming from a traditional family of winegrowers, he decided to vinify the must obtained from Grüner Veltliner, Austria's leading grape variety, in barriques. In 1998, he took over the winery from his father and in 2000 had a minimalist black cube built on top of a 150-year-old cellar dug by hand into the loess in Langenlois, adding to the appeal of the already charming Kellergassen, or cellar lanes, and establishing himself as a true pioneer of the wine architecture movement. Closer to nature, Fred practises viticulture that protects the land and resources, thereby increasing the quality of the wines. The Loimer winery began converting to biodynamic agriculture in 2006, and in 2007 Fred, together with many other fellow winegrowers, founded respect-BIODYN, a community that consistently implements and lives biodynamics in viticulture. Spontaneous fermentation with natural yeasts: weeks, sometimes months of maceration on the skins, patient maturation, without intervention or additives are just some of the "secrets"
